LET'S RIDE SAFE!

A quick guide for parents, guests, and event hosts

We want every Mini Motor Co. event to be a blast!
A few simple rules help keep the fun going and give every rider the best chance of having a safe experience.

Before the fun starts

- Choose a safe riding area. Cars may only be driven inside the course set up for the event — never on public streets, in active driveways, or where vehicles are moving.
- Keep the course clear. The riding area should be flat, firm, dry, and free of holes, debris, cords, and other hazards.
- Keep away from hazards. Do not set up near pools, ponds, stairs, steep slopes, drop-offs, fire pits, grills, or other dangerous areas.
- Cones show the riding boundary. Children must stay inside the marked course. Cones are markers, not crash barriers, so the course must also be placed safely away from traffic and hazards.
- Keep spectators outside the course. Waiting children and adults should watch from the designated viewing area.

Who can ride?

- Each vehicle has its own age, weight, and passenger limits. Follow the limits provided for the specific vehicle at your event.
- Only the number of riders allowed by the vehicle manufacturer may ride at one time. A two-seat vehicle must never exceed its passenger or combined-weight limit.
- Riders must be able to sit properly, use the controls, and follow directions. Shoes are required.
- No standing up, lap riding, carrying objects, pushing other cars, intentional bumping, or stunts.

Parents & adult supervisors: your role matters

- A responsible adult must actively supervise the riding area the entire time the cars are in use.
- Stay close enough to see the riders and step in quickly. Supervising means watching the activity — not being distracted by other tasks.
- Give children a quick safety talk before their first ride: stay inside the cones, follow the course direction, leave space between cars, slow down near turns, and stop when told.
- If too many children are riding for one adult to supervise safely, pause the activity until it can be managed.
- Remote-stop features are an extra safety tool. They do not replace an adult watching the riders.

A quick pre-ride check

☐ The course is clearly marked and away from traffic and hazards.

☐ The surface is dry, stable, and clear.

☐ Spectators and waiting children are outside the course.

☐ The adult supervisor understands the rules and is ready to actively supervise.

☐ Riders have been told the rules and vehicle-specific limits.

Thanks for helping us make the Mini Motor Co. experience fun and safe for everyone. If something doesn't look or feel safe, stop the ride and let the event host or Mini Motor Co. know.

RIDE SMART. STAY IN BOUNDS. HAVE FUN!
